Logistics

The new order management solution by Gurtam

Single service for the office and the field

Unite dispatchers and mobile employees by means of a universal service to control all stages of delivery and field services operations.

Web-version for dispatchers

Mobile app for drivers

Performing a wide range of tasks in the area of Logistics and distribution

Cost saving;

Transportation arrangements;

Transport processes optimization.

Logistics

Web-version

Easier way to manage delivery processes

Four stages of order management

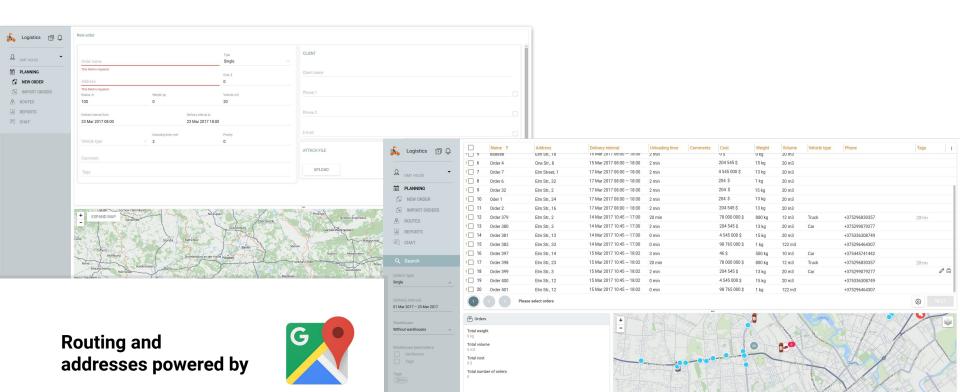

ORDERS

Add, plan and distribute orders

Optimize routes based on data from Google Maps

Manage delivery processes

Order placement

Maximum precise order description

Option to attach and view files

Search and filtration by core fields

Core fields:

- type (single/permanent);
- name and cost;
- address, time interval and radius;
- item weight and volume;
- client information (name, phone number, e-mail);
- characteristics and product description;
- vehicle type;
- unloading time.

IMPORT

of orders in Logistics

99+1 orders in one click

Import option

for the companies utilizing third-party accounting systems for order list generation.

Simple importing:

- Read data from .csv/.xlsx files;
- 2. Analyze and review pre-distributed orders;
- 3. Edit selected order information or use multiple editing option;
- 4. Benefit from order templates to save time on import and arrange orders more efficiently.

ROUTE PLANNING

in Logistics

Three steps towards optimized routes

Simple process of planning

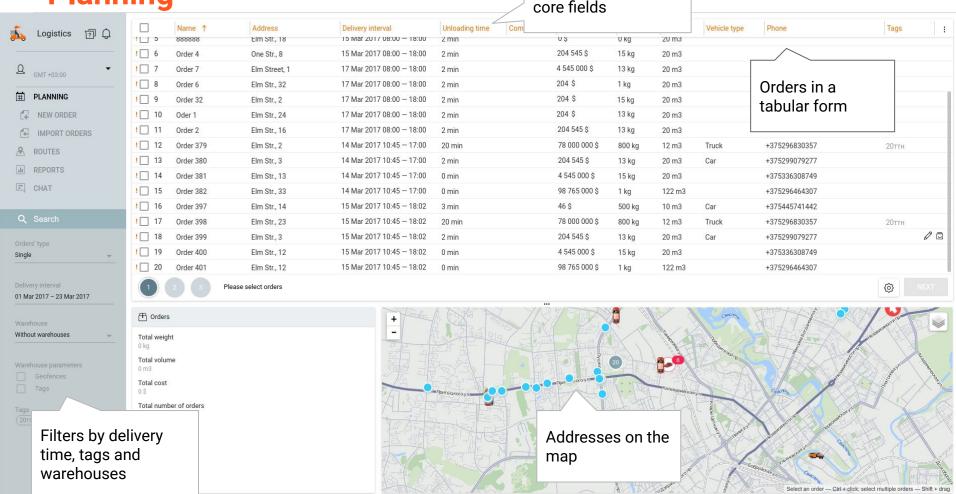

1 Select orders

2 Select vehicles

3 Check preliminary order distribution

Planning

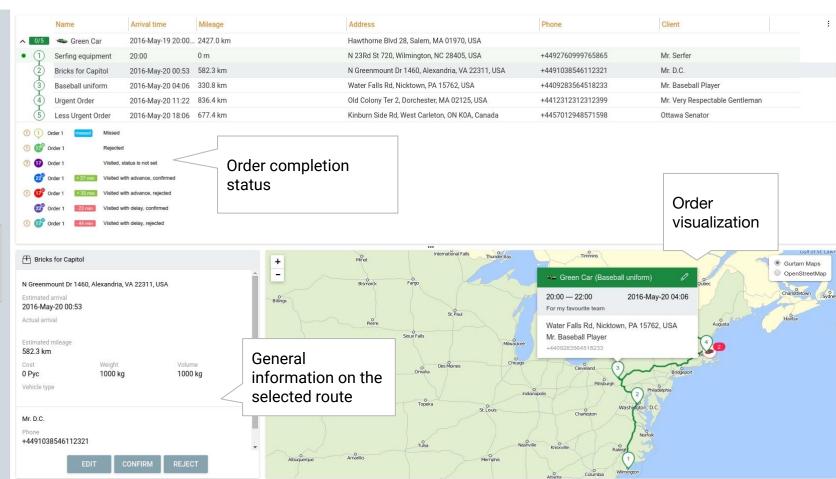

Filtration by the core fields

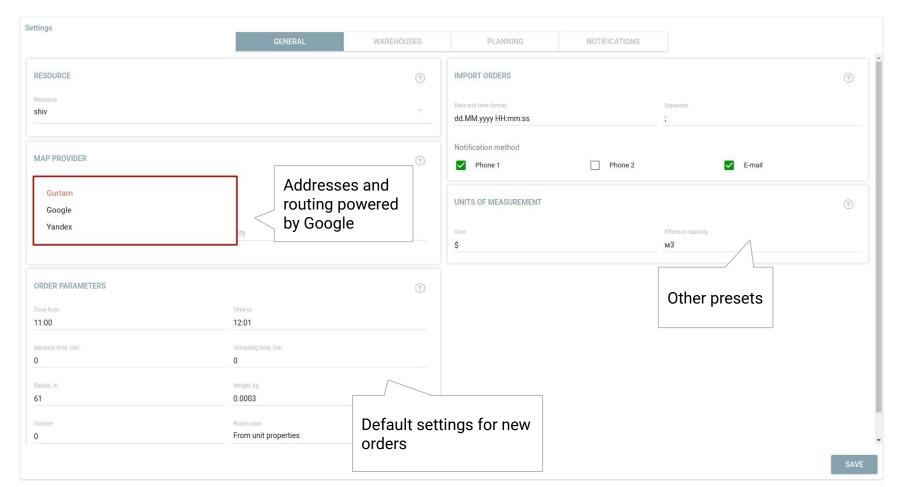

Route control

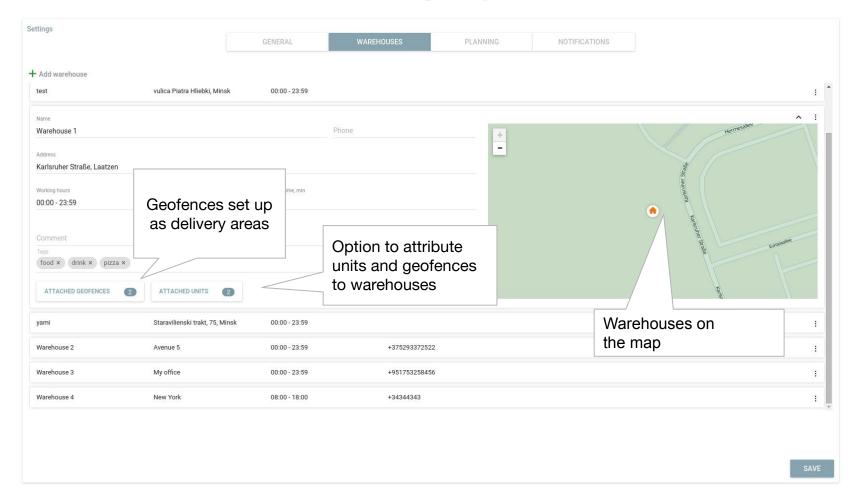

route state

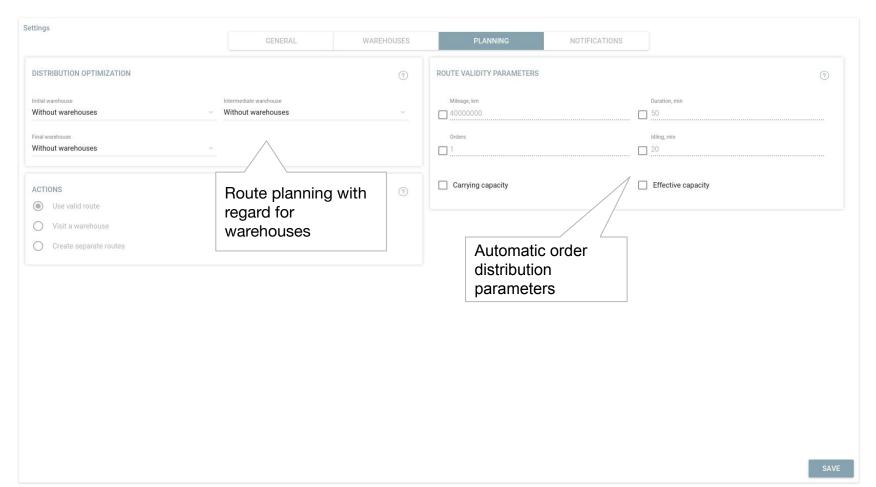

Ample pre-setting options

Effective allocation of company resources

Planning settings

Vehicle type selection based on order characteristics

Automatic order distribution

Criteria:

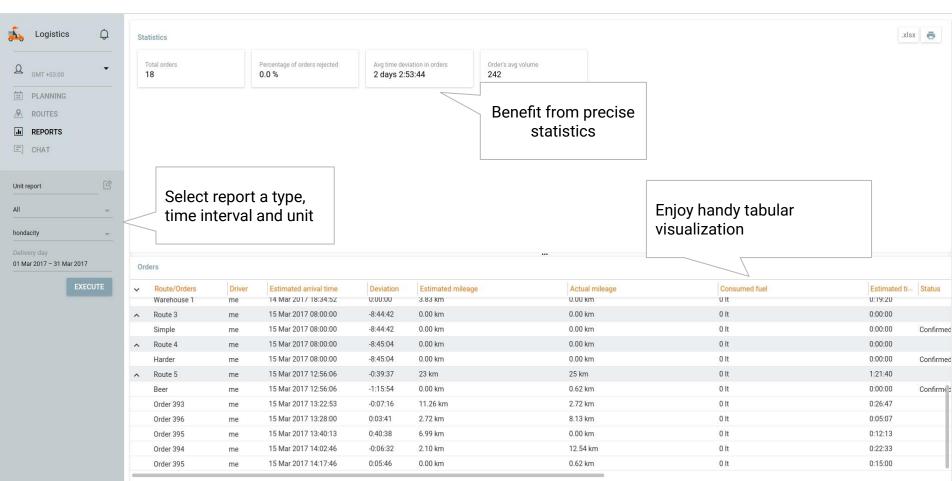

- 1. Routing (minimum time and distance)
- 2. Delivery interval
- 3. Unloading time
- 4. Effective and carrying capacity
- 5. Weight and volume of goods

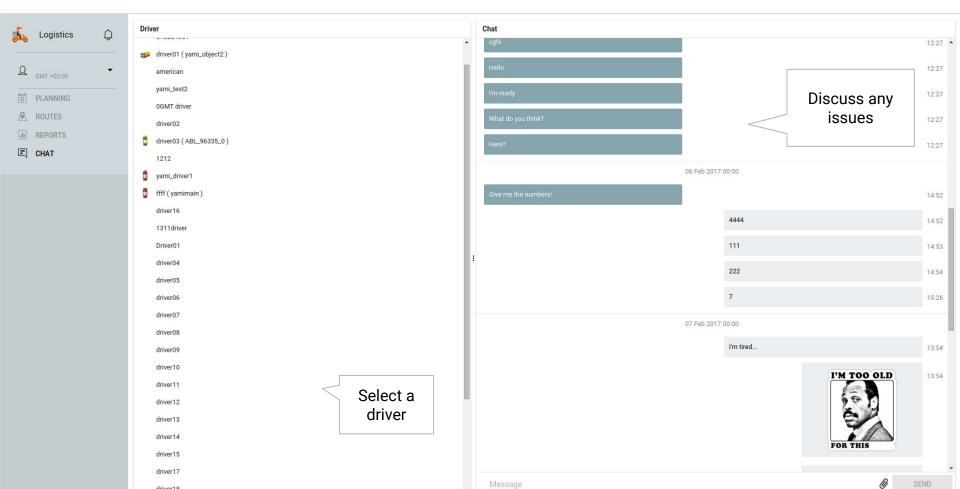

Result:

- 1. Preliminary routes
- 2. Estimated delivery time
- 3. Estimated mileage
- 4. Route adjustment option (delete order, shift it to another route, change order sequence, etc.)

Key benefits

- Routing and addresses based on data from Google Maps
- Effective "dispatcher-driver-client" communication pattern;
- Precise order information to avoid misdirected orders;
- Preliminary analysis of key performance indicators;
- Option to view files attached to the order anytime and anyplace;
- Import option for the companies utilizing third-party accounting systems for order list generation;
- Time and cost savings due to relevant order distribution across delivery areas attributed to warehouses;
- Default settings for new orders;
- Automatic order distribution based on relevant criteria;
- Option to adjust a preliminary route;
- Time saving for the office and the field due to automatic route sheet creation;

Key benefits

- Custom tags to mark orders and sort or attribute them to warehouses by given properties;
- Single and Permanent order types for occasional and regular deliveries;
- Filtration by type, time interval, warehouses and tags to prompt order selection;
- Flexible notifications for customers, dispatchers and couriers with a comprehensive HTML editor;
- Option to compare planned and actual routes to check courier performance in real-time mode;
- Route export in .pdf and .xlsx.
- Drag & drop to customize report tables and statistics;
- Temperature information in reports for those businesses engaged in refrigerated transportations;
- Comprehensive analysis of performance characteristics based on order reports;
- Reports for groups of elements with a detalization (routes+orders) or without it (routes only);
- Chat with a driver and an option to send photos.

Logistics

Mobile version

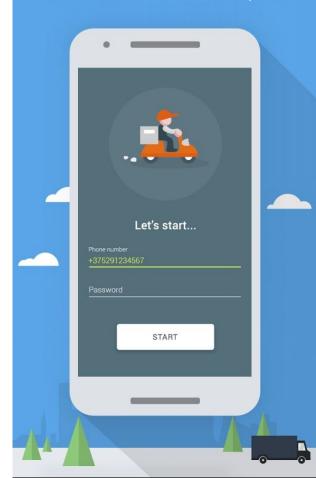

For delivery men and other mobile employees

First steps:

- Create a driver in the tracking system and bind him to a unit
- Enter driver's phone number to start authorization procedure
- 3. Check driver's binding to a unit

Logistics Mobile

Efficient courier's assistant on smartphone

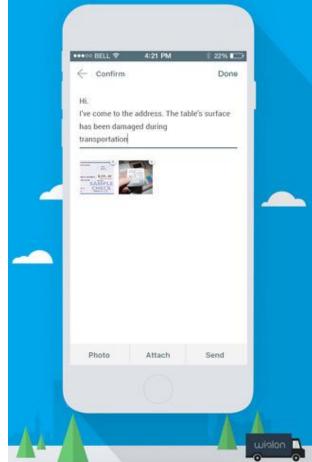

Enjoy quick access to order information and visualization on the map.

2 Get relevant information on your whereabouts, distance to the point and delivery progress.

Effective communication:

- 1. Notify dispatchers of confirmed deliveries or rejected orders.
- 2. Send photos and comments concerning the delivery process.
- 3. Deal with clients on the phone.

Leave comments to insure yourself

Key benefits

- Tablet version to simultaneously view order in a tabular form and on the map;
- Push-notifications to keep couriers informed;
- Quick connection with clients and dispatchers;
- Option to attach a photo with a customer signature, name and information on delivery date/time;
- Single vehicle or whole route visualization;
- Multiple map layers and photo quality selection;
- Options to review orders for the specified period and switch between routes;
- American and British Imperial measurements support;
- Software tracker functionality embedded.
